- 2. Turn off sleep/hibernate
 - a. Search your computer for "Power & Sleep"
 - b. Change both options to "Never"

Power	& sleep
Screen	
When plug	ged in, turn off after
Never	~
	- 230
Sleep When plug	ged in, PC goes to sleep after

- 3. Get your computer's IP Address
 - a. Search your computer for "Command Prompt"
 - b. Type "ipconfig" into the command prompt and hit enter.
 - c. Your IP address is listed under IPv4 Address (it should look like XXX.XXX.XXX) Each user will have a unique IP address. Yours will be similar to the example shown below.

hernet adapter Ethernet 2:
Connection-specific DNS Suffix .: und.nodak.edu
Link-local IPv6 Address
IPv4 Address
Subnet Mask
Default Gateway : 172.27.164.1

- 4. Do not turn off your computer.
 - a. If your computer restarts or powers down for any reason, you will need to get the IP address again (it will change).

From your home computer

5. Search your home computer for "Remote Desktop Connection."

a. Type in the unique IP Address you received in step 3

Nemote	-		×					
1	Remote Desktop Connection							
Computer:	Step 3: unique IP add	lress ∽						
User name:	None specified							
The remote computer name is not valid. Enter a valid remote computer name.
